

To Fukushima Prefectural governor to the Prime Minister

[Request to defend children in Fukushima from radiation]

A large amount of Fukushima Prefecture soils were covered with the radioactive substance to which the influence on the human body had not been completely clarified by the trouble of the first nuclear power plant in Fukushima where the edge was originated in a East Japan great earthquake on March 11, 2011. 20-kilo category and 30-kilo category are specified for the shelter district and the premeditated shelter district by the country respectively promptly corresponding, and the specification of shelter has been advanced furthermore in Fukushima Prefecture and the country according to the fact.

Moreover, it has tried to develop various measures of radiation protection as Prof. Toshikazu Yamashita is appointed to the adviser in the prefecture, and to secure Fukushima inhabitants of the prefecture's safety and safety in the prefecture.

However, the standard of the premeditated shelter district is 20mSv? that is basic of radiation protection in Fukushima Prefecture. It is set to/year, and it will give birth to children in children and the future and the standard value that has been specified for the shelter district up to now is necessarily set to a sky-scraping figure not necessarily safe for the people who try to raise it.

As for the accident of the nuclear plant in Chernobyl that occurs in old Soviet federation, the influence on the human body is not clarified, and the region where 5mSv is exceeded during year is a forced displacement. Moreover, the attack rate of cancer and the leukemia of the person who kept receiving the exposure of a low dose is places assumed for a significant difference to be seen compared with a person not so on the boundary of 10mSv/year though the causal relation cannot be proven even by the result of the survey in research laboratories that receive the consignment from the Ministry of Education, Culture, Sports, Science and Technology.

Therefore, to learn to a past history immediately, and to secure the safety of safety and parents of children who reside in Fukushima Prefecture, I will demand the thing being developed for take a measure the following in the country.

Note

- Thing that standard of 20mSv that is standard of premeditated shelter district/year is immediately estimated that receptivity to radiation is four times adult (The grade-schooler is twice) to assume the standard put together on young subjects, and to make the environment to which children take shelter easily?

Thing to give further support to people to whom it is independently taken shelter to secure children's safety even if residing to radiological threat in 30-kilo out of the sphere now?

The radiation exists a constant risk, and include the present adviser's such as Toshikazu Yamashita dismissal, elect the adviser who has wide discernment, and do the attention rousing of the awareness of crisis management necessary for the Fukushima inhabitants of the prefecture because the Fukushima inhabitants of the prefecture has a well-known [suru] necessity.

- The country completely supports the health care investigation that will be done in the future on the assumption of the thing to preserve the whole prefecture people's health. Thing to set up check organization by third party when execution, urine test, and blood test etc. of thyroid echo that contributes to earlier detection of thyroid cancer to which appearance of disease is doubted are done to the whole prefecture people object, and it undertakes the execution
- Set up a unified decision-making machinery that exceeds the frame of an existing ministry to do the setting and the information disclosure of the standard promptly for radiation protection. Execute it by the system that not only Japan but also an international standard is taken at this.

This concludes my report.

Children first

For the country and the prefecture to keep to children's future, we submit the above-mentioned demand.

This demand is children. Children independently judge and it participates in the signature activity.
